SUMMARY

Machine Learning Engineer with **12+ years of experience** owning **MLOps platforms and CI/CD pipelines** for Generative AI and Autonomous Driving (L3-L5) systems. Code and framework owner across every role — training frameworks, dataloaders, and inference pipelines — with end-to-end responsibility for the CI/CD pipelines, automated testing, and **GitOps**-based deployment workflows that ship them to production. Proven track record of bridging research and production, with a Ph.D. in Computer Science, 10+ patents, and award-winning publications. Currently responsible for the training ecosystem at **Latitude AI**, powering Ford's vision and behavioral prediction models.

TECHNICAL SKILLS

- **CI/CD & MLOps:** Jenkins, GitHub Actions, GitLab CI, GitOps (ArgoCD/Flux-style workflows), Docker, Kubernetes, Terraform, automated regression gating, canary/staged rollouts, model/artifact registries.
- **Languages:** Python (Expert), C++, CUDA, SQL, Bash, TypeScript, Java, HTML/CSS.
- **ML & GenAI:** PyTorch, TensorFlow, JAX, Transformers, Diffusion Models (DiT/VAE), Vision-Language Models (VLMs), RAG, LangChain, FlashAttention, vLLM.
- **Infrastructure:** Distributed Training (FSDP, DeepSpeed), AWS (S3, DynamoDB, EC2), Ray, Apache Arrow/Parquet.
- **Domain Expertise:** Autonomous Vehicles (Prediction/Planning), Computer Vision, Sensor Fusion, Framework & Platform Ownership.

PROFESSIONAL EXPERIENCE

Latitude AI — Palo Alto, CA
Staff Machine Learning Engineer — Jun 2026 – Present

- **Code & Framework Owner** for the training ecosystem powering **Ford** vision and behavioral prediction models — responsible for the training framework codebase, its **CI/CD pipelines**, and **MLOps** tooling gating every change before it reaches production training clusters.

Adobe — San Jose, CA
Staff Machine Learning Engineer — Sep 2024 – Jun 2026

- **GenAI Data Marketplace:** Architecting a high-performance Data Marketplace (internal Hugging Face) to support **Adobe Firefly**, serving distinct data needs across research and product teams.
- **Production Dataloader:** Developed/Maintained a high-throughput dataloader for production training, handling $>$**1M calls/month** with optimized data streaming and caching.
- **Scalable Storage:** Managed a global training feature store on a **DynamoDB cluster (20B items)**, ensuring high availability and low-latency access for distributed training jobs.
- **MLOps & CI/CD Ownership: Code and framework owner** for the dataloader and training-infrastructure repos — built and maintained the **CI/CD pipelines** (GitHub Actions, Jenkins) and **GitOps**-based deployment workflows gating every merge with automated tests, runtime profiling, and canary rollouts, accelerating deployment velocity while cutting regressions.
- **Inference Observability Platform:** Owned dashboards monitoring latency, cost, and usage across the models and pipelines in the **Adobe Firefly** model pool (including third-party models) spanning Firefly and Photoshop; built the multi-source data/query layer and time-series visualizations powering per-model and per-pipeline usage trends.

Zoox — Foster City, CA
Software Engineer - Prediction — Apr 2022 – Aug 2024

- Built prediction visualization plugin for Argus (ROS/RViz-like viewer) using TypeScript/React, Python, C++ to debug probabilistic multi-trajectory outputs across the AV stack.
- Modernized vehicular prediction: designed stable ground-truth labeling algorithm using agent direction + road target/waypoint orientation (TNT-inspired target-driven approach); replaced flickery closest-distance heuristic → delivered 2–3 production releases with major gains in intent/target and trajectory accuracy.
- Overhauled VRU (pedestrian/cyclist/motorcycle) prediction: migrated legacy CNN/top-down + MLP to transformer-based multi-intent/trajectory architecture; solved intent generation for off-road/ambiguous agents → outperformed mature baseline; owned PyTorch → ONNX → custom C++ runtime deployment.
- **Led** TensorFlow → PyTorch Lightning migration: built config-driven module registry (YAML/Proto) for MLPs, CNNs, LSTMs, GNNs, Transformers, UNet backbones; integrated wandb/CometML; achieved near-parity for key models.
- **Code & Framework Owner:** Owned the **CI/CD pipelines** (Jenkins, GitHub Actions) gating the PyTorch Lightning training framework and dataloader repositories, running the 40,000-scenario evaluation suite and novel intent/trajectory metrics as automated regression gates before every merge to the AV prediction stack.

Qualcomm Research San Diego, CA
Senior Systems Engineer Jan 2019 – Feb 2022

- Replaced rule-based prediction with XGBoost multi-class classifier (lane keep, lane changes); built data pipeline parsing/annotating ROS bags → trained model beating baseline → hand-wrote C++ inference engine for Snapdragon Ride platform (zero external dependencies).
- Led GRIP++ (RNN+CNN-based) trajectory prediction implementation: developed custom rasterization pipeline to convert raw ROS logs into training-ready visual renders; achieved state-of-the-art results by 2021.
- **MLOps & CI/CD:** Built automated CI pipelines (Jenkins) for the on-device C++ inference engine — automated build, ROS-bag regression testing, and staged rollout to the Snapdragon Ride platform, with weekly HTML validation reports feeding the release gate.
- Filed 2–3 patents on Vehicle-to-Vehicle (V2V) communication and prediction corner cases for autonomous driving.

Standard Chartered Scope International Chennai, India
Software Analyst Jun 2012 – Jul 2013

- Developed financial software systems and data analysis tools for banking operations.

INTERNSHIPS

Qualcomm Research San Diego, CA
Systems Integration & Test Intern Summer 2018

- Developed prediction metrics framework: analyzed ROS bags using Python APIs, extracted performance metrics from rule-based prediction system, generated automated HTML reports for weekly reviews.

Microsoft Research Bangalore, India
Research Intern Summer 2016

- **Project AutoCalib:** Designed software for automatic traffic camera calibration. Achieved speed estimation errors of $< 10\%$ without manual intervention.
- Published results in *ACM BuildSys 2017* (Won Best Paper Award).

Tata Elxsi Chennai, India
Project Intern Summer 2011

EDUCATION

The Ohio State University Columbus, OH
Ph.D. in Computer Science & Engineering 2013 – 2018
M.S. in Computer Science & Engineering 2013 – 2017
IIT Madras Chennai, India
B.Tech in Electrical Engineering (Minor in Mathematics) 2008 – 2012

SELECTED PUBLICATIONS

- **AutoCalib:** Automatic calibration of traffic cameras at scale. *ACM TOSN 2018 & ACM BuildSys 2017* (Best Paper & Best Demo).
- **SmartDashCam:** Automatic Live Calibration for DashCams. *ACM IPSN 2019*.
- **RoadView:** Live View of On-Road Vehicular Information. *IEEE SECON 2017*.
- **CaneScanner:** Obstacle Detection for People with Visual Disabilities. *IEEE INFOCOM 2018*.

PATENTS

10+ patents granted/pending in AV prediction, behavior trees, and calibration: **US 12,668,281** (Database generation including predicted scenarios, Zoox); **US 12,654,739** (Tree based behavior predictor, Qualcomm); **US 12,542,054** (Managing vehicle behavior based on predicted behavior of other vehicles, Qualcomm); **US 10,580,164** (Automatic Camera Calibration, Microsoft); **US 10,032,370** (Mobile communication device based Secure Interaction, Honda).

HONORS & SERVICE

- **Awards:** Best Paper & Best Demo (ACM BuildSys 2017), Best Paper (IEEE INFOCOM 2018 MiSeNet), NSF Travel Awards (2017, 2018).
- **Scholastic:** All India Rank 274 (Top 0.1%) in IIT-JEE; Top 1% in National Physics/Math Olympiads.
- **Service:** Associate Editor for *IEEE RA-L*; Reviewer for *ACM TECS*, *IEEE TMC*, *ToSN*.
- **Technical Blog:** Author of gopikrishnatummala.com, publishing in-depth technical deep dives on generative AI and model scaling, advanced MLOps and production-grade infrastructure, autonomous systems engineering, and agentic AI design and deployment.
